

Record of Reanalysis

Evaluation Name: [Title] | Evaluation Code: [XXXX] | Date finalized: [Date]

How this document is to be used:

This document is associated with the Reanalysis gate in the OES project process. For a step-by-step guide to Reanalysis and a summary of roles and responsibilities, see the internal guide to the OES project process.

This document is completed by the reanalyst. It is for internal OES use only. However, it should contain sufficient detail to stand alone as a complete record of all planned/confirmatory analysis, sufficient for the project lead to be able to understand whether each component of the lead analysis was supported or whether discrepancies need to be diagnosed and resolved. The final section, "Reconciliation with Initial Analysis," is used to record any changes made to the reanalysis after comparing it with the lead analysis.

Analysis

Background

[Briefly describe the reanalyst's understanding of the study design, objectives, and planned analysis.]

Insert text here, and delete the red prompt above when the document is final.

Methods

[Describe all analyses conducted in sufficient detail that they could be replicated exactly. These should match what was proposed in the Analysis Plan. Any departures should be noted below (see section Departures from Analysis Plan). Include a link to your code.]

Insert text here, and delete the red prompt above when the document is final.

Results

[Include results of all analyses described in the Methods section, including checks on model assumptions etc. Include tables & graphs. If results are contained in other files, include links to those files here.]

Insert text here, and delete the red prompt above when the document is final.

Departures from Analysis Plan

[Describe any departures from the Analysis Plan, including any exploratory analyses. Include rationales for these departures and statistical adjustments made to account for unplanned tests.]

Insert text here, and delete the red prompt above when the document is final.

Limitations

[Describe any limitations associated with the analysis, including any limitations that only became apparent during the course of the analysis.]

Insert text here, and delete the red prompt above when the document is final.

Exploratory Analysis

[Describe any exploratory analysis completed by the reanalyst.]

Insert text here, and delete the red prompt above when the document is final.

Reconciliation with Initial Analysis

[Describe how the reanalysis compared to the initial analysis and any discrepancies that had to be diagnosed and resolved. If reconciliation led to changes in the initial analysis, the lead analyst will revise their Record of Analysis and describe the revisions in general terms in the final section of that document. If reconciliation led to changes in the reanalyst's work, the reanalyst should describe those changes here.]

Insert text here, and delete the red prompt above when the document is final.
